

Mr. James Skinner
McDonald's Corporate Headquarters
2111 McDonalds Dr.
Oak Brook, IL 60523

Dear Mr. Skinner,

I am writing to you regarding the issue of light bulbs in your restaurants. As you know, the traditional incandescent bulbs currently found in most restaurants are more expensive to operate, and less efficient than the modern compact fluorescent and LED bulbs.

By switching out incandescent bulbs for compact fluorescent bulbs, you could potentially save seventy-five percent of the energy that you use to light your restaurants. And, because the lifespan of a fluorescent bulb is about ten times that of an incandescent bulb, new bulbs would have to be bought far less often.

The long life and efficiency of compact fluorescents more than offsets their slightly higher upfront cost. In fact, each fluorescent bulb can save thirty dollars or more during its lifetime, when compared to an incandescent bulb.

You operate thousands of restaurants. If one compact fluorescent bulb saves more than thirty dollars, it's easy to see that changing the bulbs in each of your restaurants has the potential to save you millions of dollars, while also showing that you care about the environment, and about conserving energy.

Please seriously consider making the change from incandescent to fluorescent or LED lighting. I look forward to hearing from you, and to visiting one of your efficiently-lit restaurants in the near future.

Sincerely yours,

Mr. John Chidsey
Burger King Corporate Headquarters
5505 Blue Lagoon Dr.
Miami, FL 33126

Dear Mr. Chidsey,

I am writing to you regarding the issue of light bulbs in your restaurants. As you know, the traditional incandescent bulbs currently found in most restaurants are more expensive to operate, and less efficient than the modern compact fluorescent and LED bulbs.

By switching out incandescent bulbs for compact fluorescent bulbs, you could potentially save seventy-five percent of the energy that you use to light your restaurants.
